WEEPA - A Small Detail That Makes A BIG Difference

Weepholes play an important role in brick veneer construction by allowing moisture to drain from the wall cavity. But open weepholes can also give unwanted visitors — like mice, cockroaches and spiders — an easy way into the cavity.

💡 BRICKIE TIP

A weephole is there to let water out — not pests in!

Weepa is a small product, that adds protection, and makes a big difference to moisture management and pest protection in your next house build.

Weepa vents are quick and easy to install during construction and are designed to:

- Allow moisture to drain from the cavity
- Help keep rodents and pests out
- Fit neatly into the weepholes of 70 Series brickwork
- Provide a simple finishing detail for new builds

There are also **stainless-steel retrofit Weepas** for existing brick veneer homes, making it easy to upgrade older buildings too.

Worth considering as a standard part of your next bricklaying job.
